

## SASS

Sass is an extension of CSS which helps save time. It provides some features which I turn can be used to create style sheets and help maintain code. SASS is coded in ruby while LESS is coded in JavaScript.

## LESS

Less always users to customize, maintain and manage stylesheets for websites. LESS is a language that can be used on different browsers. LESS is written using JavaScript and compiles data very fast. It also makes the code more readable and easy to make changes to.
